

ASSEMBLY INSTRUCTIONS

PLEASE NOTE:

Each installation should only be carried out by a professional with knowledge of the legal sanitary requirements.

We point out that a liability of products of Sandhelden GmbH & Co. KG does not take place for improper use.

Furthermore, it should be noted that we offer some products without the so-called overflow. In this respect, there is a risk that the water may run over the upper edge of the product. The absence of an overflow corresponds to the agreed condition of the product and is not to be considered a quality defect.

CAUTION:

Shrinkage lines, air holes, casting lines and defects on the underside of the product are no quality defects, if these are not visual after a proper installation the function of the product is not affected by this.

CLEANING:

All Sandhelden products can be cleaned with commercially available cleaning agents, provided that these do not contain any acids.

Cleaning is quick and easy. For normal cleaning work, a damp cloth (not a microfiber cloth) is usually sufficient. Any dirt should be removed immediately with water (not warmer than 65 degrees) so that it cannot take effect. This applies in particular for hair dyes. Stronger stains should be removed with a scratch-free cleaning sponge evenly in circular movements. Afterwards, clean the surface with water and a soft cloth.
